

ONE
DROP

One Drop | Professional

View patient data in real-time, provide education and support beyond the clinic, and deliver cost-effective clinical results — all through a single integrated platform.

Cost Savings for Your Organization

- Call center cost obviation
- Immediate savings on supplies
- Real-time risk assessment, triage, and intervention
- Fewer emergency hospital visits
- Reduction in long-term diabetes complications

Clinical Outcomes

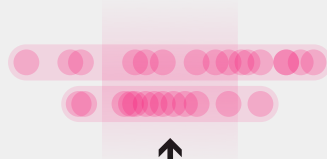

One Drop mobile app users reduced A1C by 1.0 percentage point in as little as 2 months.

8.2 > **7.2%** Drop in A1C

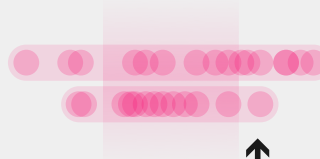

In as little as 4 weeks, One Drop mobile app users enrolled in remote text-based coaching:

Reduced average blood glucose from **185 mg/dL** to **158 mg/dL**

Nearly **doubled** percentage of in-range blood glucose readings

Reduced average percentage of high blood glucose readings from **19%** to **4%**

Consistently tracked food and blood glucose over time

One Drop | Professional is a fully integrated solution for payers, providers, and patients:

- For Payers/Providers: a web-based interface to analyze, manage, and interact with an entire patient population
- For Patients: an award-winning mobile app, live in-app chat with CDEs, and Bluetooth-connected blood glucose monitoring

All seamlessly integrated across the entire One Drop platform.

For more information: contact@onedrop.today

For Payers/Providers:

- Manage thousands of patients at a time via a HIPAA-compliant web-based platform
- See real-time patient data and analytics on a simple web-based dashboard
- Send in-app chat messages to patients instantly
- View and analyze all relevant patient data — glucose, medications, food, activity, weight, A1C, etc. — in one place
- Deliver specialized educational content anytime
- Stratify population and triage high-risk individuals
- Complete EMR/EHR integration

For Patients:

- Self-monitor blood glucose using sleek hardware and a gorgeous mobile app
- Instantly sync blood glucose data with the cloud via mobile app
- Work one-on-one with CDEs via in-app chat
- Track and analyze all data — glucose, medications, food, activity, weight, A1C, etc. — in one app
- View mobile and web-based reports showing blood glucose, food, medication, and activity data
- Interact with a worldwide community of people living with diabetes
